CaseStudy

One of the largest logistics companies in Southern Europe ran its own service workshops for many years but had difficulties understanding its true maintenance costs. The management team believed that they could not optimize the utilization of their trailers, due to the centralized inland service facilities used. The structure did not always allow the company to check and service their trailers as they were operating mainly at ports. Maintenance from GE's FleetCare enabled them to better control their costs and increase trailer productivity. Their trailers are now checked and fixed quickly on site, and sent to the closest GE's service workshop when needed.
